

ATAGENIX LABORATORIES

Catalog Number:ATMP02491COV Recombinant SARS-CoV-2(2019-nCoV) Nucleocapsid protein

Product Details

Summarv

Recombinant SARS-CoV-2(2019-nCoV) Nucleocapsid protein
ATMP02491COV
Recombinant SARS-CoV-2 Nucleocapsid protein is produced by Mammalian cells
expression system and the target gene encoding Ser2-Ala419 is expressed with N-
His Tag
Mammalian cells
Severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2)
QHD43423.2
Nucleoprotein
47.79kDa
>90% as determined by SDS-PAGE
Please contact with the lab for this information
Supplied as solution form in PBS, pH7.5 or lyophilized from PBS, pH7.5
In general, proteins are shipped out with blue ice unless customers require
otherwise.
Use a manual defrost freezer and avoid repeated freeze thaw cycles.
Store at 2 to 8 °C for one week .
Store at -20 to -80 °C for twelve months from the date of receipt.
Please refer to the instraction in the hard copy of COA.
Immunogen

Background

Coronavirus N protein is required for coronavirus RNA synthesis, and has RNA chaperone activity that may be involved in template switch. Nucleocapsid protein is a most abundant protein of coronavirus. N protein packages the positive strand viral genome RNA into a helical ribonucleocapsid (RNP) and plays a fundamental role during virion assembly through its interactions with the viral genome and membrane protein M. Plays an important role in enhancing the efficiency of subgenomic viral RNA transcription as well as viral replication. Because of the conservation of N protein sequence and its strong immunogenicity, the N protein of coronavirus is chosen as a diagnostic tool.
